Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1, 2, 6-21, drawn to a pilot/production, analyzing/curing system, classified in class 118, subclass 663.
 - II. Claims 3, 4, 22-33, drawn to a method of curing coating on articles, classified in class 427, subclass 553.
 - III. Claim 5, drawn to a method of curing coating on articles, classified in class 427, subclass 551.
 - IV. Claim 34, drawn to a single zone curing station, classified in class 118, subclass 620.

Distinctness

The inventions are distinct, each from the other because:

2. Inventions I and II/III/IV are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed could be practiced by another materially different apparatus such as a system having no conveying means so that articles are moved manually.
3. Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different

Art Unit: 1762

inventions II and III are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects since contrary to invention II, invention III includes a step of pulsing the energy source to penetrate a coating.

4. Inventions IV and I/II/III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions IV and I/II/III are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects since contrary to inventions I/II/III, invention IV includes a single zone curing station.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. A telephone call was made to Mr. John Sceriotis on September 30, 2002 to request an oral election to the above restriction requirement, but did not result in an election being made.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
